Management notes (full period, 1997–1998)

- Network revenue grew 112.2% in 1998; comparable-store revenue grew 8.4%.
- Gross margin (59.7%) is set by fixed product prices and costs; it moves only with product mix.
- The top 10% of active customers generated 39.9% of revenue.
- Return rate (proxy) stayed near 1.0% of units sold.
- Store size alone does not explain revenue; review productivity by store.

Source: Maven Market sample data (Kaggle), Jan 1997 – Dec 1998, star schema in data/model. Gross product profit = revenue − product cost; it excludes operating costs.

Sales Performance

Same-store revenue grew 8.4% in 1998; the rest of the 112.2% came from new stores.
